

Title: **COVID-19 and Hearing Loss Survey - Dalhousie University, Halifax, NS, Canada**

Research Purpose

The purpose of this research is to investigate the incidence of sudden sensorineural hearing loss (SSNHL), hearing changes and other hearing dysfunctions (e.g., tinnitus, hyperacusis, etc.) in patients who have contracted COVID-19. The survey is for hearing professionals in Canada and the United States of America.

Survey Invitation

We are inviting hearing professionals in Canada and the US to participate in an online survey investigating sudden sensorineural hearing loss and other hearing changes in patients who have had COVID-19. This survey is being conducted by Patricia Van Roon, PhD candidate at Dalhousie University (Canada) and has been approved by the Dalhousie University Research Ethics Board. Please click the link to access the short survey (LINK).
